Learning Outcomes

- LO1: Compare the 2023 prompt, 2024 context, 2025 harness and 2026 agent engineering paradigms and evaluate their impact on business models.
- LO2: Identify and prioritise realistic AI-agent opportunities using process evidence, value measures and human accountability.
- LO3: Digitalise a bounded workflow with Hermes Agent tools, context, memory, skills and specialist subagents.
- LO4: Conduct feasibility and cost-benefit analysis for an AI-agent pilot using measurable assumptions and risk-adjusted controls.
- LO5: Implement and evaluate a governed multi-agent marketing or video campaign with security, data governance and human release approval.

Assessment

- Written Assessment (SAQ): 30 minutes, five questions mapped to A1–A5.
- Oral Questioning (OQ): 30 minutes, five questions mapped to K1–K4.
- Assessment occurs after the eight training hours on Day 1.
- Candidates must be competent in both instruments.

Topic 5	Security Governance and Implementation	Lab 8	105

AI-Agent Use-Case Alignment

The ten patterns are realistic business reference implementations inside Topics 1 and 2. Learners identify trigger, capability graph, reviewable output, evidence, risk and named human gate; the gallery does not extend the approved eight training hours.

Domain	Use-case IDs	Teaching emphasis
Customer and Revenue	UC-01–UC-02	Draft, analyse and recommend while people retain customer and commercial authority.
Operations and Supply	UC-03–UC-04	Convert recurring operating signals into exception queues and reviewable decisions.
Regulated Knowledge Work	UC-05–UC-06	Ground high-stakes analysis in approved sources and qualified review.
People and Public Service	UC-07–UC-08	Improve access and routing without delegating sensitive employment or public decisions.
Marketing and Media	UC-09–UC-10	Separate research, creation, review and publication into accountable specialist roles.
